Dear ERNI Hiring Team,

I am applying for the Fullstack Developer role at ERNI's International Delivery Center in Valencia. I have just completed my Master's Degree in Computer Engineering at UPV, and across two roles at the Instituto Tecnológico de Informática (ITI) I have shipped React/TypeScript features, back-end integrations, and an automated data-access workflow. I am available to start immediately.

Your point that, in the age of AI, speed alone is not enough, and that business-critical solutions need quality, robustness, and security from the start, matches how I work. At ITI I built a LangGraph agent that turns natural-language questions into read-only SQL, and I designed it around schema selection, validation, and retry-on-error before any query touched the data.

Here is what I would bring to your client teams:

- Front-end with TypeScript: I implemented new React/TypeScript features for ITI's personnel management Intranet. Angular is my next step: it is TypeScript-first, and I already picked up Kafka and Spring Boot on my own through self-directed projects.
- APIs, databases, and integrations: in AIDucate I built a JWT-secured Go REST API on PostgreSQL, integrated the Gemini API as an external service, and deployed the frontend on Vercel and the backend on Render.
- Event-driven and serverless patterns: I built a Function-as-a-Service platform with Docker workers and NATS JetStream queues, and a Kafka microservices system with dead-letter topics and idempotent processing.

I have not yet worked with Azure Functions, but building my own FaaS platform taught me the model behind them: queue-triggered functions running in containers and scaling horizontally. Your certification coverage gives me a clear path to Azure certification. I am based in Valencia, so the hybrid office days suit me, and I work comfortably in English, Spanish, and Catalan.

I would welcome the opportunity to discuss how I can contribute to your Valencia delivery teams.

Kind regards,

Álvaro López Álvarez
